

Asbestos Consultancy

We provide independent strategic asbestos consultancy and high-level expert advice across a wide range of industries and building types. Whilst most asbestos consultancies focus on identifying the risk through **asbestos surveys**, bulk analysis and **air monitoring services**, we help our clients with the bigger picture.

How can an asbestos consultant help me?

Our team of environmental consultant specialists look beyond hazardous risk and substance identification and focus on helping you handle the process of compliance and ongoing management of asbestos in your buildings and assets.

As the UK's market leading supplier of asbestos testing, inspection and consultancy, we have a substantial amount of experience in managing the risks of asbestos. Our team of consultants are able to provide technical expertise for asbestos management in-line with current legislation, guidance and the Control of Asbestos Regulations (CAR 2012).

Taking the complexity out of asbestos management, our experienced, trusted consultants undertake a broad range of consultancy support services to aid our clients including the development of comprehensive asbestos management plans, the review of asbestos contractor method statements to ensure compliance and asbestos register reviews to prioritise any remedial action required ,

As part of our compliance support services, we also offer system audits and management plan compliance audits/reviews which ensure duty holders have a clear plan with fundamental systems and processes in place and that it is communicated to all key personnel. We ensure you not only achieve compliance, but have the ability to put in place best practices protecting your stakeholders from risk.

Our consultants also:

- Assist duty holders in managing their asbestos and guide them through the identification, assessment and control process
- Write removal specifications with a clear project brief to ensure client requirements are at the forefront, ensuring project scopes and schedules are understood and considered prior to the design of asbestos encapsulation or asbestos removal works.
- Act as project manager and/or Principal Designer for your asbestos removal works including tendering projects, vetting contractors and suppliers and overseeing delivery.
- Review Licensed Asbestos Removal Contractor (LARC) Risk assessments and plans of work, ensuring your project requirements are met
- Assess existing training requirements, taking into consideration estates teams, maintenance teams, CDM duty

holders and facilities teams and anyone who may come into contact with asbestos-containing materials.

- Provide recommendations for further project progression
- Provide risk averse or most economically advantageous solutions to potential or present issues

We pride ourselves on having a team of consultants with a proven track record for managing large and complex projects, working alongside client project teams with specific delivery requirements. With a solid understanding of regulations and cohesively communicating with all relevant stakeholders and contractors, our consultants will help you achieve compliance and reduce the risks of exposure.

What are my responsibilities?

As the duty holder, you are required to effectively manage your asbestos risks in line with the Control of Asbestos Regulation (CAR) 2012, protect your building occupants, environment, organisation and others from the risks of asbestos.

Our specialist asbestos management consultants have a track record of helping our clients successfully manage their asbestos risks in multiple sectors. Find out why we were named 'Best Risk Management Consultancy 2019' and learn more about the people we have worked with through our wealth of case studies.
